Where You Came From: In Finder, go into the View menu and select Customize Toolbar. Drag the Path button into your Finder toolbar and click Done. By clicking this button, a menu pops-up and shows where you are on your computer (In what folder is the folder you're viewing, what folder that one's in, etc.), with the currently viewed folder at the top of the list to the most general location you are in at the bottom (Your computer). Select one to go to it.

Drag a file or folder to the list on the left of the Finder (Click the white button in the top right corner of the Finder window if you can't see it) to have quick access to it.

Tip
